## Apsis Labs Stationery

---

Paragraphs are separated by a blank line.

2nd paragraph. *Italic*, **bold**, `monospace`. Itemized lists look like:

- this one
- that one
- the other one

Note that --- not considering the asterisk --- the actual text content starts at 4-columns in.

Block quotes are written like so.

They can span multiple paragraphs, if you like.

Use 3 dashes for an em-dash. Use 2 dashes for ranges (ex. "it's all in chapters 12--14"). Three dots ... will be converted to an ellipsis.

## An h2 header

Here's a numbered list:

1. first item
2. second item
3. third item

Note again how the actual text starts at 4 columns in (4 characters from the left side).

Here's a code sample:

```
# Let me re-iterate ...  
for i in 1 .. 10 { do-something(i) }
```

As you probably guessed, indented 4 spaces. By the way, instead of indenting the block, you can use delimited blocks, if you like:

```
define foobar() {  
    print "Welcome to flavor country!";  
}
```

(which makes copying & pasting easier). You can optionally mark the delimited block for Pandoc to syntax highlight it:

An h3 header

Now a nested list:

1. First, get these ingredients:
  - carrots
  - celery
  - lentils
2. Boil some water.
3. Dump everything in the pot and follow this algorithm:

```
find wooden spoon  
uncover pot  
stir  
cover pot  
balance wooden spoon precariously on pot handle  
wait 10 minutes  
goto first step (or shut off burner when done)
```

Do not bump wooden spoon or it will fall.

Notice again how text always lines up on 4-space indents (including that last line which

continues item 3 above). Here's a link to [a website \(http://foo.bar\)](http://foo.bar). Here's a link to a [local doc \(local-doc.html\)](local-doc.html). Here's a footnote <sup>[^1]</sup>.

<sup>[^1]</sup>: Footnote text goes here.

Tables can look like this:

First Header	Second Header	Third Header
Content Cell	Content Cell	Content Cell
Content Cell	Content Cell	Content Cell

Done.

Apsis	Date
Client	Date
